I understand that the **MSI II Adult Male** form uses nationally standardized census matched norms.

I understand that the **MSI II Adult Female** form is standardized on a group of (N=75) "Normal" non-sex offending females, (N=550) admitting female sex offenders and (N=100) "guilty denier" female sex offenders (they later admitted guilt or were found to be guilty).

I understand that the **MSI II Adolescent Male** form is standardized on a group (N=650) of adolescent male sex offenders ranging from age 12 to 19 (no "normal" non-sex offending adolescent males were used).

I understand that the **MSI II Adolescent Female** form is not standardized on adolescent females. The results are compared to adolescent male and adult female norms and findings are based on clinical knowledge of the test.
